

The complete range of pillar and wall jib cranes for loads up to 6.3 tonnes.

Jib Cranes

ABUS Jib Cranes in action
An everyday demonstration of productive teamwork

ABUS Pillar Jib Cranes

Effortlessness put into motion

Performing work in teams unites the potentials of individuals to form a strong company. ABUS jib cranes are efficient partners performing their tasks reliably and easing the load on the people who use them. With its comprehensive product line of jib cranes, ABUS offers flexible and cost efficient material handling solutions for any job in the workplace.

ABUS jib cranes can be individually tailored – from the type of mounting or hoist to optional configurations for particular requirements – all produced to ABUS' high levels of quality.

With the touch of a button, they can handle loads up to 6.3 tonnes precisely and effortlessly – whether mounted on their own pillars or on walls or columns. For loading

machines, changing heavy tools or lifting workpieces onto tables for processing – with ABUS jib cranes, the lifting is easier, more efficient and safer.

ABUS Wall Jib Cranes

The effective slewing range depends on the installation position; it may be greater or less than 180°.

Standard Models

The basis for working safely

- Building codes**
- version in accordance with DIN 15018 (Cranes; principles for steel structures) and EN 60204-32 (Electrical equipment of machines)
 - the jib cranes and hoists meet the requirements of EU machinery directive as well as the German “Equipment and Product Safety Law”
- General design**
- welded ribs on pillar base for reliable transmission of forces and torque
 - corrosion protection through rust removal by mechanical shot blasting to DIN 55928
 - single-layer painting of pillars and jib arms in RAL 1007, daffodil yellow
 - direct control with 400V/50Hz control voltage (for jib cranes with electric chain hoist ABUCompact GM8 and electric wire rope hoist with 48V control voltage as standard)
 - complete with electrical systems including lockable mains switch and power supply to the hoist
 - electrical equipment with class F insulation, protection type IP 55
 - operated from floor level via the ABUCommander pendant controls (protection type IP 65)
- Hoists and trolleys**
- ABUS electric chain hoist ABUCompact**
- 2 lift speeds for quick lifting and precise setting down of loads in a ratio of 1:4 (1:6 for ABUCompact GM8)
 - pole-changing rotary cylinder motor with electromagnetically releasable disc brake
 - adjustable slipping clutch with reliable safeguard against mechanical overloading
 - easy-to-assemble, quick-fitting connectors for electrical power supply and control cables
 - class F insulation, protection type IP 55
 - motor housing painted in RAL 5017, traffic blue
 - high-strength, galvanised profile steel chain with chain container
 - push-pull trolley, which is rolled on the lower jib arm flange or in the profile of the jib arm
 - clamping buffers fitted as end stops for the trolley
- ABUS electric wire rope hoist GM**
- 2 lift speeds for quick lifting and precise setting down of loads in a ratio of 1:6
 - 2 travel speeds in a ratio of 1:4
 - pole-changing rotary cylinder motors with electromagnetically releasable disc brakes
 - contactor control 48V
 - electronic overload protection with hours in operation counter (included as standard if EU machine directive is applicable)
 - easy-to-assemble electrical connections with quick-fitting connectors
 - class F insulation, protection type IP 55
 - gear unit limit switches for highest and lowest hook position
 - painted in RAL 5017, traffic blue
 - galvanised lift cable specially constructed for increased service life
 - convenient size due to compact construction
 - practically maintenance-free due to direct drives and lifetime lubrication of the gear units and roller bearings
- Requirements for use**
- ABUS jib cranes and components are designed exclusively for use in completely enclosed buildings under normal industrial operating conditions.

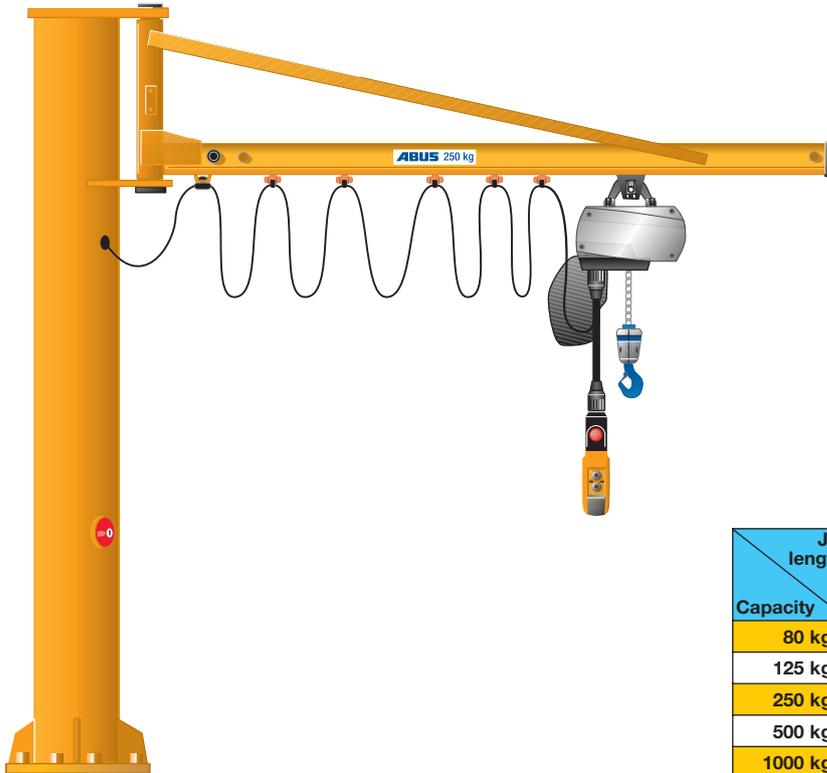

ABUS Pillar jib crane LS

Making work easier

Capacity: to 1 t
Jib length: to 7 m ^{*)}

^{*)} depending on load capacity

with electric chain hoist

- lightweight design (DIN 15018 H2/B2)
- jib arm made of sturdy, hollow steel sections
- safety anchoring with ribbed pillar base
- trolley with easy roll plastic rollers
- square crane pillars

A typical ABUS feature
“Added-value” solutions from a single source

If you plan a jib crane with ABUS, there are really no limits. Everything you need to turn a single crane into a convenient complete solution is available – from a single supplier. This makes planning easier and helps cut costs – not only when buying your crane but also in the years which follow.

Because the whole is simply worth more than the sum of its parts, it also pays to take a close look at the performance features and cost advantages of ABUS extras, components and accessories.

1

Slip-rings

Power supply via slip-rings for infinite 360° slewing.

2

Plug connectors

Equipped exclusively with plug connectors designed for rapid, trouble-free connection when installing and servicing. This saves time and ensures greater safety.

3

Powered trolley

The electrically driven trolley moves at the push of a button.

4

ABUS electric chain hoist

For reliable lifting from 80 kg to 4 t.

5

Bolted end connection plate

For rapid mounting of the trolley without prior disassembly.

6

Powered slewing gear

Electrically driven slewing for smooth travel.

7

Safety pillar base

The specially designed pillar base with precisely welded ribs and internal support ring ensures safety and stability.

ABUS Jib Cranes

Daily in action

Pillar jib crane LS with electric chain hoist ABUCompact GM2

Capacity:	100 kg
Jib length:	3 m
Overall height:	3.5 m

The pillar jib crane LS is typically used for lifting tasks that are mostly in the lower capacity range. As shown here in the example of transmission and engine manufacture, the load can be quickly and safely raised and e.g. set down on a pallet. The high lifting speed of 12 m/min with the electric chain hoist also contributes to efficient work performance. The crane is mounted on the existing base plate by means of an intermediate steel plate.

Wall jib crane LW with electric chain hoist ABUCompact GM2

Capacity:	250 kg
Jib length:	7 m
Lift height:	3.1 m

The wall jib crane LW is an unobtrusive and reliable aid when it comes to moving lighter loads by hand. Its lightweight design allows it and its load to be guided quickly and precisely even at longer jib lengths. This is an effective aid to daily operation – as in this case in the picking area for packaging machines. This crane is mounted with a bracket on the building support column. The brackets fit around the supports, even those with large cross-sections, to bring the crane to the desired height.

**Pillar jib crane LSX
with electric chain hoist
ABUCompact GM2**

Capacity:	500 kg
Jib length:	3.2 m
Overall height:	3.4 m

The advantages of the pillar jib crane LSX are evident in workplaces with restricted room heights, as can be seen here in the measuring room for components of machine tools. Due to its special construction with the raised jib arm, a good lift height can be reached even with low ceilings. Jib arm and hoist are located at a safe distance away from the area in which the operator moves. The crane is mounted by means of a steel dowel plate with special floor dowels conforming to the permissible dynamic loads.

**Wall jib crane LWX
with electric chain hoist
ABUCompact GMC**

Capacity:	100 kg
Jib length:	3 m
Lift height:	2.5 m

Low ceilings and additional required floor clearance are typical criteria for selecting the LWX wall jib crane. Its low space requirements and practicable lift height make a strong argument in its favour.

The continuously controllable ABUCompact GMC provides particularly delicate lifting and setting down of the load at this assembly station.

The wall bracket included in the delivery is used to mount the crane on a steel support in the room's wall.

ABUS Jib Cranes

Daily in action

Pillar jib crane VS with electric chain hoist ABUCompact GM8

Capacity:	2 t
Jib length:	7 m
Overall height:	6 m

Used in the assembly of road construction machines, this VS pillar jib crane moves larger loads that can no longer be safely and conveniently moved by hand. The crane is therefore equipped with electric, 2-speed drives for the trolley and slewing. Operation is independent of the load position with mobile pendant controls that move parallel to the jib arm, simplifying handling and ensuring safer working. The crane is securely anchored to a base foundation.

Wall jib crane VW with electric chain hoist ABUCompact GM4

Capacity:	1 t
Jib length:	5 m
Lift height:	5.3 m

This crane is required in tank and container construction for transport of loads between work levels of different heights. The design of the wall jib crane VW enables the given building dimensions to be used to the fullest, so that the transfer of the load is achieved at the highest possible lift height. The crane has electric, 2-speed trolley and slewing drives, without which the desired movements of the load would be practically impossible. Weld-on plates are used to mount the crane directly on the steel supports of the building.

**Pillar jib crane VS
with electric wire rope hoist
GM 1000**

Capacity:	5 t
Jib length:	7 m
Overall height:	5 m

Plates and steel components of varying size and weighing up to 5 t are required in mould and die production. With the pillar jib crane VS, these can be reliably moved. With electric, 2-speed trolley and slewing drives equipped as standard, the crane can be easily operated via the freely movable control unit with the pendant controls. The cone-shaped pillar tip allows the smallest possible approach dimension to the pillar even with high loads. The crane is solidly mounted on a large-sized base foundation with anchor rods.

**Wall jib crane VW
with electric wire rope hoist
GM 800**

Capacity:	3.2 t
Jib length:	5 m
Lift height:	3 m

Tight installation conditions, high load capacities and a precise movement of the load into the tool machine characterise this application example. The optimisation of the lift height at 3.2 t is achieved through the use of an ABUS electric wire rope hoist. Two-speed control of electrically driven movements in all directions enables delicate handling of workpieces and equipment. The crane is mounted with weld-on plates at the back on the additionally placed support structure.

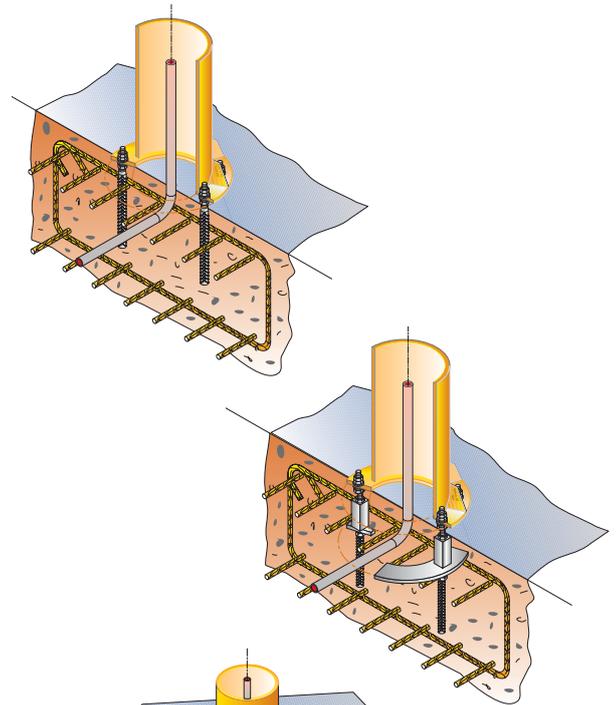

Mountings for Pillar Jib Cranes

A question of standpoint

Foundation block with anchor bolts

The currently most regularly requested type of mounting for pillar jib cranes uses anchor rods. These are positioned within a concrete foundation block. ABUS delivers the anchors and a steel template for positioning and aligning the anchor box as well as the required information for pouring a foundation with reinforcement in accordance with DIN 1045-1.

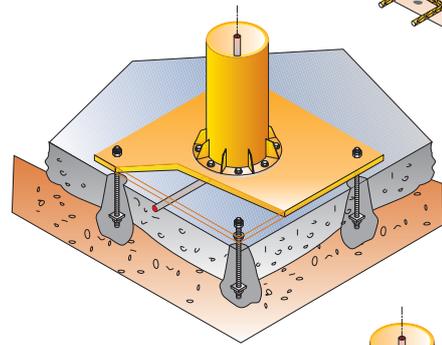

Foundation with ABUS ideal anchors

ABUS ideal anchors offer an intelligent mounting alternative whenever the later site of the crane is to remain freely walkable and drivable for the time being. The two-part anchor rods are connected to each other with sleeves. The sleeves are flush with the floor surface and are protected by cover caps.

To mount the crane, threaded bolts are screwed into the sleeves.

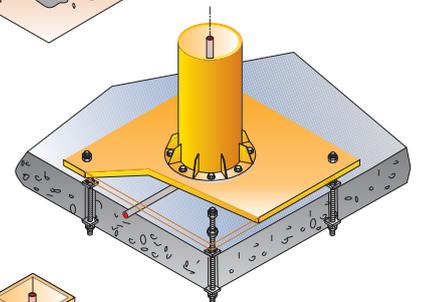

Intermediate plate on a concrete floor

Using a square intermediate plate, the crane can be mounted on a suitable existing concrete floor. After the floor plate has been drilled and chiselled out, anchors are inserted and cast. ABUS delivers the intermediate plate and, on request, the appropriate floor anchors.

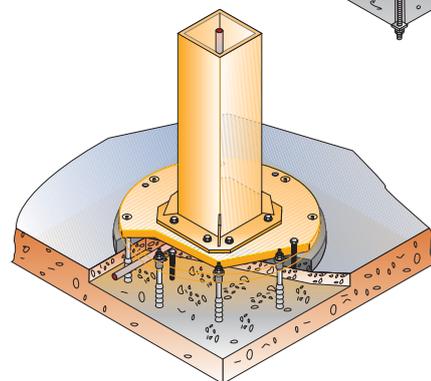

Intermediate plate on a concrete suspended ceiling

Alternatively, the intermediate plate can be mounted to a suitable concrete ceiling with through-wall anchors. ABUS delivers the intermediate plate and, on request, the appropriate through-wall anchors.

Dowel plate on a concrete floor/a concrete ceiling

Pillar jib cranes of average Safe Working Loads are particularly efficient with our dowel mounting system. This system uses Fischer dowels, especially developed for dynamic loads, which are fitted into the counter-sunk holes of the round dowel plate during install. ABUS delivers the dowel plate, the required dowels as well as a mould ring for the grouting.

Alignment and underpouring

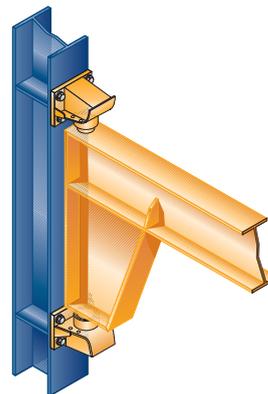

Safety while working requires the careful alignment of a crane prior to initial operation. The existing floors are not always level enough to ensure this. All mounting systems of our pillar jib cranes therefore offer the necessary room for adjustment through an assembly gap. The subsequent grouting of the crane ensures stability.

Mountings for Wall Jib Cranes

Adapted flexibility

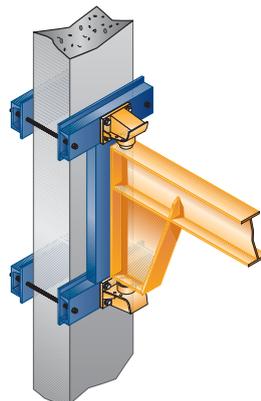

On steel supports using wall bracket/mounting

The simplest type of mounting of wall jib cranes is the bolting onto existing steel supports. For this, the supports must be of structurally sufficient size (they may need to be reinforced) and exhibit a sufficiently wide connection surface. All ABUS wall jib cranes include this mounting option in the scope of delivery of standard equipment. For types LW and LWX this is provided through the wall bracket and for type VW through direct bolting on of both wall mountings.

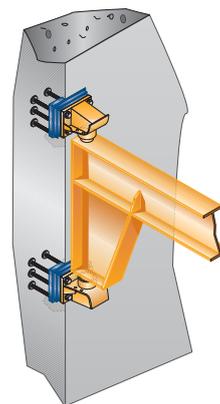

On reinforced concrete supports using brackets

On structurally suitable, square or rectangular reinforced concrete supports which can be freely enveloped, wall jib cranes can be mounted with brackets. The required tension forces can be applied through threaded rods to hold the crane securely to the support at the desired height. The support must have the required minimum width for this. ABUS delivers brackets designed for the support dimensions, together with the required mounting material.

On reinforced concrete walls or supports using weld-on plates

Concrete walls or supports can be prepared for the mounting of wall jib cranes on weld-on plates through suitable mounting plates with grouted anchoring as a substructure. When performing this construction work, care should be taken that the mounting plates lie exactly flush and exhibit plumb-vertical connection surfaces. The weld-on plates are welded to the substructure. The wall bracket or the wall mountings of the crane are bolted onto the weld-on plates. ABUS delivers the weld-on plates with the required mounting screws.

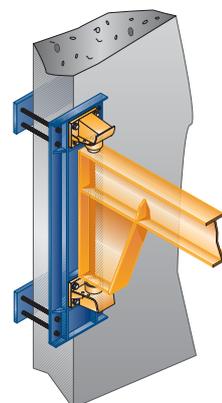

On steel supports using weld-on plates

Weld-on plates can be welded directly onto steel supports or load-bearing steel structures providing holes will not or cannot be drilled through them. (not pictured)

On reinforced walls using wall brackets and through-wall anchors

For mounting on reinforced concrete walls of adequate load-bearing capacity, wall brackets are used. For the types LW and LWX, the wall bracket is included in the scope of delivery. For the type VW, it is available as optional equipment. The wall brackets are mounted on the wall with ties and counterplates. Included in the ABUS scope of delivery are the anchor rods, counterplates and the required mounting materials, all adapted for the respective wall thickness.

Structural inspection of the building

Jib cranes transfer forces and torque to the building and supporting structures. Safe crane operation depends entirely on the adequate checking of the support structure by a structural engineer.

ABUS Hoists

Powerhouses for more than just jib cranes

*) depending on load capacity

ABUCompact GMC
Capacity: to 200 kg
Lifting speeds*): to 12 m/min

ABUCompact GM2
Capacity: to 630 kg
Lifting speeds*): to 20 m/min

ABUCompact GM8
Capacity: to 4,000 kg
Lifting speeds*): to 20 m/min

ABUCompact GM4 (not pictured)
Capacity: to 1,250 kg
Lifting speeds*): to 20 m/min

ABUCompact GM6 (not pictured)
Capacity: to 2,500 kg
Lifting speeds*): to 16 m/min

ABUS electric chain hoists

Among the powerhouses of the ABUS jib cranes are the ABUS electric chain hoists ABUCompact. The hoists of the ABUS chain hoist generation ABUCompact are distinguished by a fresh design and convincing technical features. In connection with jib cranes, the chain hoists GM2, GM4, GM6 and GM8 with 3 Ph/400 V offer reliable power packs for load capacities to 4 t in a particularly low headroom design for optimum utilisation of space. They also boast a precision lifting function for careful raising and lowering of sensitive goods.

The smaller GMC rounds out the ABUCompact series. A continuous lift speed for 100 or 200 kg, and the fact that it is delivered ready for connection to a 230 V socket, makes it the ideal chain hoist for flexible application in lifting lighter loads.

The modular construction of motor and gear units opens the stage for a comprehensive range of products with lift speeds of up to 20 m/min or FEM classifications to 4 m – at a persuasive price.

In addition, there are advantages that are especially appreciated in practice: minimal maintenance

work required due to especially durable brake linings (in normal cases, 1 million full load brakings until the first readjustment), lifetime lubrication of precision gear units, adjustable slipping clutch, specially hardened low-wearing chain, plug connectors for safe mounting or inspection, and much more. For more information, please refer to our product brochure “ABUS Electric Chain Hoists”.

ABUS Electric wire rope hoist design “E” monorail trolley

ABUS electric wire rope hoists GM

The ABUS electric wire rope hoists GM cover the essential load range from 1 to 120 tonnes. Five basic models are available, all with main and precision lifting speeds as standard equipment.

And these units are compact. All components feature endurance – from motors to wire ropes, from gear units to brakes, from power systems to electronic circuitry. For more information, please refer to our product brochure “ABUS Wire Rope Hoists”.

ABUS Crane Systems

Overall plans outlined in detail

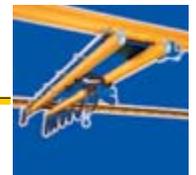

ABUS Crane systems and components:

Overhead cranes

Jib cranes

Light crane systems

Lightweight mobile gantries

Electric wire rope hoists

Electric chain hoists

High-performance components

Add to this the special self-conception of ABUS:

When we offer something, we offer it based on advice that focuses on practical use, with assured quality, with individual user support and comprehensive, fast and reliable service with 24-hour availability.

ABUS has specialised in floor-free lifting and conveying technology to 120 t – deliberately. Not only because this load range represents the vast majority of applications, but also in order to pass onto you the economic benefits of product standardisation to the full. ABUS offers a comprehensive range of economical and immediately available materials handling solutions: overhead cranes, jib cranes, light crane systems, lightweight mobile gantries, mono-rail hoists, electric wire rope hoists, electric chain hoists and a wide variety of components. The range thus extends from solutions for extraordinary applications to the implementation of complete material handling systems.
